Divyansh Gupta

Nagpur, Maharashtra | +91-6394136405 | divyansh3578@gmail.com | LinkedIn | GitHub | Portfolio

Java Backend Engineer (Spring Boot) with a strong DSA foundation and hands-on experience building full-stack projects with REST APIs, databases and AI/LLM-backed features. Focused on secure, scalable, production-style services.

Education

Indian Institute of Information Technology (IIIT), Nagpur | 2025 – 2029

B.Tech in Computer Science and Engineering | CGPA: 8.7

Projects

PramaanAI: AI-Powered Bid Compliance and Verification Platform | AI, OCR, Blockchain, Vercel | GitHub | Live Demo

- Built a platform that automates tender compliance verification using AI, OCR, rule-based validation and risk detection.
- Added government data verification and blockchain-based auditing for a tamper-evident record, keeping the final decision with the authorized officer.
- Developed as separate backend and frontend modules and deployed the frontend on Vercel.

CivicSeva: AI-Powered Urban Complaint Management | Backend, Frontend, ML Services | GitHub

- Built a platform that automatically classifies, prioritizes and routes citizen-reported issues to the right authorities.
- Structured as separate backend, frontend and ML-services modules, with real-time complaint tracking for transparency.

CryptoScope: Cryptocurrency Analytics Platform | Live Market Data APIs | GitHub

- Built a web platform for tracking real-time crypto market data, managing a personal portfolio and learning about blockchain.
- Integrated live market data APIs into a responsive interface.

Technical Skills

Languages: Java (primary), JavaScript, C, SQL, HTML, CSS

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security (JWT), REST API design, Node.js, Express

Databases: MySQL, MongoDB

AI Integration: LLM APIs (OpenAI / Claude / Gemini), Spring AI, prompt engineering, text classification, RAG basics

Tools: Git, GitHub, Postman, Maven, Docker (basics), React

Career Focus

- Building production-grade REST services with Spring Boot, JPA and secure JWT authentication.
- Adding AI features to backend systems: LLM-powered APIs, classification pipelines and semantic search.
- Designing clean, scalable architectures and writing maintainable, tested code.
